CERTIFICATE OF COMPLIANCE & TESTING

FLAP VALVE – MODEL F3012T

Flap valves shall be of the circular port design with offset single pivoted hinge. Flap valves are designed to open under direct pressure and close when direct pressure from outfall fluid is relieved. The valve disc is offset from vertical to ensure positive closing.

The Flap valves shall have a cast iron (A126B) body and cover. The seat and disc ring shall be bronze (B62) and the hinge pin and cotter keys brass (CDA360). The valves shall be constructed with a 10 degree offset from vertical to ensure positive closure. The flange shall be drilled using ANSI 125 pound template.
